

FOUNDRY COLLECTIVE

A personal marketing operating system

Thirteen specialist agents.

Thirty-seven skills.

One system that thinks, plans, writes, designs, and reports across every marketing function.

Vikram Ghatge

The Proposition

Foundry Collective is a marketing team encoded as an operating system.

It uses shared brand context, specialist agents, atomic skills, and memory loops to plan and execute across the full marketing function.

Design goal

13

SPECIALIST AGENTS

Strategy, research, content, creative, SEO, AI visibility, PR, social, podcast, demand, webinars, and analytics.

37

EXECUTION SKILLS

Bounded modules that produce concrete deliverables, from blogs and decks to audits and reports.

6

BRAND BRAIN FILES

Portable context files that make outputs adapt to the active organization.

Make marketing execution repeatable without flattening judgment, brand voice, or cross-functional handoffs.

System logic: one shared brain + specialist ownership + atomic execution + continuous learning

Core Idea: Make AI Work Like A Real Marketing Team

A real marketing team

Specialists share context, take ownership of sub-functions, hand off work, and improve from campaign history.

Foundry encodes that pattern

Agents own functions. Skills produce outputs. The brand brain grounds every decision. The ledger captures what was learned.

The outcome

Strategy, content, creative, demand, SEO, PR, social, podcast, webinars, and analytics work as one coordinated system.

Brief -> specialist judgment -> skill execution -> routed deliverables -> insights written back to memory

Four-layer Architecture

LAYER 01

THE BRAND BRAIN

Six context files plus the insights ledger. This grounds every downstream decision.

LAYER 02

THE THIRTEEN SPECIALISTS

Sub-agents that own marketing functions and orchestrate multi-step work.

LAYER 03

THIRTY-SEVEN SKILLS

Atomic execution modules for concrete, reusable deliverables.

LAYER 04

ROUTED OUTPUTS

Ads, pages, decks, reports, SEO, social, PR, email, podcast, and webinar assets.

Architecture principle: context is read at runtime, never hardcoded.

The Brand Brain: Six Files That Make The System Portable

Brand_Context

Positioning, ICPs, differentiators, and the strategic why.

Brand_Voice_Guide

Tone rules, banned jargon, and how the brand sounds.

Brand_Style

Hex colors, fonts, visual grid, and design constraints.

Brand_Product_Offerings

Services, buyer personas, pain points, and value proposition.

Brand_Growth_Marketing_Context

Channels, funnel, goals, benchmarks, and operating environment.

Brand_Style_Reference

Generative visual style library and prompt starters.

Swap these files and every agent, skill, and output adapts to the new brand context.

The Thirteen Specialists

Each specialist owns a marketing sub-function, orchestrates multi-step work, calls skills, and writes learnings back into shared memory.

Agent Or Skill: The Routing Logic

The system routes work based on judgment required, not tool preference.

Straight to a skill

Use this path when the brief is bounded and the deliverable is clear.

Example: write a blog post on X.
Output: one content artifact.

Decision checkpoint

Route to a specialist agent

Use this path when the work needs judgment across formats, channels, or teams.

Example: launch X with a full content push.
Output: strategy, assets, creative, reporting, and memory updates.

Simple deliverable = skill. Multi-step marketing effort = agent.

Thirty-seven Skills: Atomic Execution Modules

BRAND BUILDING

- build-brand-context
- build-brand-voice
- build-brand-style
- build-brand-products
- build-brand-growth
- build-brand-style-reference
- build-brand-deck-template
- sample-archive-index

CONTENT AND EDITORIAL

- blog-writer
- lp-builder
- social-copy
- email-copy
- copy-editing
- lead-magnet

CREATIVE AND DESIGN

- ad-creative
- branded-deck
- image
- social-creative-designer
- data-visualization

STRATEGY AND PLANNING

- campaign-brief
- market-research
- keyword-research
- abm-account-plan
- lead-gen-strategy
- webinar-plan
- social-strategy

SEO AND AI VISIBILITY

- technical-seo-audit
- on-page-optimization
- aeo-foundations
- citation-audit

PR, PODCAST AND REPORTING

- press-release
- media-pitch
- crisis-response
- executive-thought-leadership
- podcast-episode-plan
- podcast-show-notes
- campaign-report

Each skill does one bounded job. Agents call skills; marketers can also call skills directly for one-off tasks.

How The Specialists Work Together

Handoffs are explicit, deliverables are named, and every insight can be written back into shared memory.

Example Workflow: Full Campaign Launch

The value is not only asset creation. It is coordinated execution with learning captured for the next campaign.

Tools Stack: Integrations With Fallbacks

Ideogram · Flux · Nano Banana · GPT Image

AI image generation across four best-in-class models.

Unsplash · Pexels

Licensed stock photography and video.

Canva

Typography, layout assembly, brand-kit templates, and export.

Exa · Firecrawl

Neural search and clean web extraction for research.

Windsor

350+ marketing, ads, analytics, CRM, and commerce connectors.

NotebookLM

Multi-document analysis and synthesis.

**Every integration is optional.
Missing tools do not block work because each capability has a fallback path.**

Operating Principles

01 Brand voice is non-negotiable

Every customer-facing output follows voice and visual style.

02 Cite every claim

Unsupported claims stay marked as draft assumptions.

03 No invented proof points

No fake case studies, customers, or metrics.

04 Read from context

Agents and skills read the active brand context at runtime.

05 Write like a human

Avoid AI tells, stock jargon, and unnatural phrasing.

06 SOPs are law

Codified workflows are treated as the source of truth.

The principles make output trustworthy at scale.

FOUNDRY COLLECTIVE
